Output (OUT 1, OUT 2, OUT 3)		Judgment output or alarm output (setting selectable), NPN transistor, open-collector / PNP transistor, open-collector (selectable): In case of using NPN output - Maximum sink current : 50 mA - Applied voltage : 3...24 VDC (between output and 0 V) - Residual voltage : <2 V (at 50 mA of sink current) In case of using PNP output - Maximum source current : 50 mA - Residual voltage : < 2.8 V (at 50 mA of source current)									
Output operation Short circuit protection		Open when the output is ON. Incorporated (automatic restoration)									
Output polarity setting input		NPN open collector output operates when 0 V is connected. PNP open collector output operates when 24 VDC is connected.									
Timing input		NPN output operates when 0 V is connected and NPN is set (depending on settings). PNP output operates when external power (+) is connected and PNP is set (depending on settings).									
Multi input		Zero set, zero set off, reset, memory switching, teaching, saving, and laser control according to the input time. In case NPN output is selected, function varies according to the time 0 V is connected NPN. In case PNP output is selected, function varies according to the time external power (+) is connected.
